Experience

Full-Stack Software Engineer, Rowland.ai – Tulsa, OK (remote) January 2026 – May 2026

- Developed across the stack implementing a RAG-architected PostgreSQL and Qdrant backend, building scalable features using Python's FastAPI, and rich user experiences using React/Next.js and Node.js
- Reduced overall processing latency by 10% and increased throughput by leveraging Python's asynchronous processing and batching libraries
- Built a real-time communication system using Redis to cache and sync document statuses, providing instant UI updates and removing the need for database polling
- Identified a key issue with database setup and performed migrations to ensure Postgres database was in sync with Atlas schemas

Senior Customer Success Manager, Transect – Austin, TX (remote) September 2025– January 2026

- Drove a 10% increase in average account size focused on tailored, value-based early renewal deals
- Maintained a retention rate 30% higher than industry trends by keeping high-touch personalized communications and early renewal engagement
- Acted as a Subject Matter Expert in the early stage renewables field providing insight into forward looking product planning

Software Engineer, PVcase – Boulder, CO (remote) February 2023 – February 2025

- Developed and maintained large-scale Angular and React web applications serving 2,000+ users, architecting workflow-based navigational patterns and enhancing state management for improved user experience
- Strengthened codebase integrity and security by leading a major Angular version upgrade, assessing and eliminating key dependency vulnerabilities, and pioneering Cypress testing to ensure high-quality deployments
- Designed and implemented a refactor of the event-driven backend system configuration, enhancing predictability and consistency in interactions with the database
- Founded and led a UI developer guild, creating a better developer experience across teams and resulting in three technical debt initiatives prioritized and shipped
- Partnered with Product, QA, and cross-functional teams to translate business requirements into technical designs, delivering expedited bug fixes and feature enhancements that minimized system disruption and improved client satisfaction.

Technical Client Success Specialist, Anderson Optimization – Boulder, CO (remote) April 2021 – February 2023

- Oversaw 60+ client accounts with a retention rate of over 80%, onboarding large scale accounts and providing ongoing support for all active users
- Developed automation scripts in JavaScript and Python to streamline development processes, saving time for the team and enhancing platform functionality for users prior to UI integration
- Wrote bug tickets and feature requests as well refined existing tickets to clearly communicate issues and client goals

Skills

Languages: Javascript, Typescript, Python, SQL, HTML, CSS/SASS/SCSS

Frameworks/Libraries: Angular, React, [Next.js](#)

Technologies: Node.js, Git, AWS, Openlayers, Vite, Cypress, Jest, AG Grid, Tailwind CSS, Material UI, RxJS, Redux

Databases: PostgreSQL, SQL, Firebase, MongoDB, Redis

Education

University of Minnesota – Bachelor of Individualized Studies (psychology, computer science and music) December 2016
